

Habitake QA Automation – Real AI Prompts Used During Project

1. Login Automation Prompt

Generate Playwright Python automation script for login functionality using Page Object Model.

Requirements:

1. Valid login
2. Invalid login
3. Empty field validation
4. Invalid email validation
5. Password validation
6. Screenshot capture
7. Assertions
8. Reusable methods

2. Add Property Automation Prompt

Generate Playwright automation script for Add Property module.

Include:

1. Property title
2. Property type selection
3. Country dropdown
4. Address input
5. Image upload
6. Price validation
7. Success popup handling
8. Screenshot capture
9. Assertions

3. Dynamic Locator Handling Prompt

Act as Playwright expert.

Provide stable locator strategy for dynamic elements.

1. Avoid XPath.
2. Use:
 - a. locator()
 - b. get_by_role()
 - c. filter()

- d. has_text()
- 3. Element:

4. File Upload Automation Prompt

Generate Playwright Python code for image upload functionality.

Requirements:

1. Upload image from test_data folder
2. Validate upload success
3. Handle dynamic upload popup
4. Use reusable method
5. Add Image Label

5. Screenshot Handling Prompt

How to store Playwright screenshots inside screenshots folder in framework structure.

Requirements:

1. Save screenshots inside project folder
2. Avoid saving in root directory
3. Use proper relative path

6. Logout Automation Prompt

Generate Playwright automation for logout flow.

Include:

1. Profile click
2. Logout button
3. Confirmation popup
4. Yes button handling
5. Login page verification
6. Screenshot support

7. Postman Positive Negative Edge Script Prompt

Generate Postman test scripts for GraphQL API.

Include:

1. Positive validations
2. Negative validations
3. Edge case validations
4. Response time validation
5. Status code validation
6. JSON response validation

8. Login API Prompt

Generate Postman test scripts for Login API.

Include:

1. Token validation
2. JWT validation
3. Success field validation
4. errorCode validation
5. Response schema validation
6. Negative checks
7. Edge cases

9. Logout API Prompt

Generate Postman test scripts for Logout API.

Include:

1. Positive validation
2. Invalid session validation
3. Invalid userId validation
4. UUID format validation
5. Response message validation

10. Bug Report Prompt

Create professional QA bug report.

Include:

1. Bug title
2. Module
3. Steps to reproduce
4. Expected result
5. Actual result

6. Severity
7. Priority
8. Environment

11. Root Cause Analysis Prompt

Analyze Playwright automation failure.

Provide:

1. Root cause
2. Locator issue
3. Wait handling issue
4. Suggested fix
5. Stable automation strategy

12. Regression Execution Prompt

Generate regression execution checklist.

Include:

1. Smoke validation
2. Critical flows
3. API execution
4. UI automation
5. Release readiness
